Metaflex®

Technical Data Sheet

DESCRIPTION:

Powerful acidic cleaner product is specially designed for noble metals such as copper, aluminum, chrome, magnesium, etc. In addition to effectively cleaning, it also has a whitening power for the treated surfaces. Its dual-action formula makes it an excellent choice for aluminum whitening. This product has an acidic pH and is biodegradable. However, we recommend not using it to clean boats or other watercraft near lakes to preserve the aquatic ecosystem.

USE DIRECTIVES:

This product is specially designed to remove stubborn stains on copper, aluminum, and stainless steel. Simply spray the product onto the surface to be treated and let it sit for a maximum of 1 to 2 minutes. Then rinse thoroughly with water, both the treated surface and its surroundings. It is important to note that this product is highly acidic and poses a danger to the user. Therefore, it is imperative to wear a mask, protective goggles, and gloves when using it. Always perform a compatibility test before use.

PROPERTIES & BENEFITS

- Biodegradable and 100% dilutable
- Highly effective and economical
- Non-flammable and low odor
- Color: colorless
- pH value: <1.0, highly acidic.

Content	Type	Art.-No	pH	Flammable
